ABOUT ME

I am Abbas (Parham) Payam, a seasoned Front End Developer with a strong focus on React and Next.js technologies. Over an impressive career spanning over 4 years, I have honed my skills and expertise in the field of front-end development, becoming a reliable and innovative professional in the process.
I have had the privilege of working for 3 international companies, where I have been instrumental in driving their digital transformation efforts. My contributions have ranged from developing user-friendly interfaces to optimizing web performance, ensuring a seamless user experience across various platforms.

WORK EXPERIENCE

FRONT END DEVELOPER

Wolfin- Turkey

Sep2022 - Sep2023

In my role at this company, I primarily worked on "Play to Earn" projects which included.

- A photo shooting website
- A focus to earn project
- A football fantasy game
- A trade to earn money project
- An nft marketplace

some of technologies are:

react.js,redux.js,react-query,axios,material ui,styled-component, web3-react,web3

FRONT END DEVELOPER

Nexprover - England

Sep2021 - Sep2022

I primarily work on decentralized applications (DApps), with a particular focus on NFT shops and marketplaces that also include an admin dashboard. In addition, I also develop conventional websites for various clients.

- I worked on an NFT shop where I implemented wallet connections and facilitated the sale of NFTs.
- I have experience working with smart contracts, utilizing technologies such as Web3, Web3-React, and Ether.js.
- I developed a website for a client that was based on DApps for selling tokens. This project also involved the use of Web3, Web3-React, and Next.js.

- I created an advertising website for another client, implementing features such as sign-in and sign-out functionality, as well as refresh tokens.
  The technologies I used for this project included React, Redux, Saga, and Axios.
- I worked on an NFT marketplace similar to OpenSea, where users could create and sell NFTs. This project involved various blockchain-related tasks such as minting, listing, and swapping.

some of technologies are:

react.js,next.js,redux.js,redux saga,react-query,axios,styled-component, web3-react,web3

FRONT END DEVELOPER
Improver Digital Technology - Turkey

Feb2020 - Sep2021

I was responsible for writing, styling, and managing the front-end components of our company. This included creating websites and admin panels for clients, as well as for .our company's internal use

- I updated the company's website from HTML/CSS to React.js
- I worked on an admin dashboard for one of our client's websites which included JWT token authentication, tables, API calls, and Socket.IO
  The technologies I used for this project were React, Redux, Saga, Axios React Hook Form, and Bootstrap
- Additionally, I collaborated with a coworker on a social media admin dashboard, For this project, we primarily used React.js, Redux, and Axios
- I worked on a help center website using Next.js and Axios
- I also developed a website for a client that featured page transitions and GSAP animations. This project was built in Next.js using Styled-Component

some of technologies are:

reacts.js,next.js,redux.js,redux saga,axios,styled-components

FRONT END DEVELOPER
Freelance

May2018 - Feb2020

I have developed websites using HTML, SCSS, JavaScript, and React for clients who required an online portfolio or a landing page. These projects, while not extensive in scale, were tailored to meet the specific needs of each client, showcasing their work or services in a professional and engaging manner

some of technologies are:

Adobe Photoshop · Adobe Illustrator · Figma (Software) · JavaScript · React.js · HTML · Cascading Style Sheets (CSS) · SASS · GreenSock Animation

MY TOOLS

Redux,Redux-saga,Axios,React-query,Yup,Hook form, Gsap animation,Framer motionStyled-components, Material ui, ...
